Bioengineering

The new Bioengineering Building is a hub for research and teaching at the interface of biology, engineering and physical sciences. It builds on UC Santa Barbara’s strengths in biophysics, biomaterials, biomolecular discovery, and computational and experimental systems biology, enabling fundamental scientific discoveries to be transitioned to applications in medicine and biotechnology.

This three-story, 48,000-square-foot building houses state-of-the-art research labs and shared facilities, multi-disciplinary faculty and students, and a 100-seat auditorium. It is the new home of the Center for Bioengineering, the Institute for Collaborative Biotechnologies, and the emerging degree programs and department of Biological Engineering.

Directions to Lot 3:
(Highway 217 Main Entrance)

• Enter campus through the Henley Gate.
• At Steck Circle (roundabout), please follow it around (making almost a full circle) to Lagoon Road.
• Continue on Lagoon Road and make a right onto UCen Road.
• Parking Lot 3 will be on your right at the end of the road.
